250
The information sent by the participants 121 is aggregated by the computer program 147 and sent to the initiating party 110 for review.

255
The initiating party 110 reviews the offers. At this time, the initiating party 110 may use their client device 113 to accept or reject a particular offer or make a counter offer.

260
A tabular representation of all offers and counteroffers is sent from the server 140 to the client device 113 so that the initiating party 110 can track all transactions.

265
The transaction is processed by a transaction engine. Transactions engines are known in the art of ecommerce.

270
The data pertaining to the offers and counteroffers and participants 121 is stored on the database 150. This step occurs for every transaction, regardless whether a satisfactory set of terms was reached.
